SUMMARY

- 2.9+ years of professional experience as a Full-Stack Software Developer, building backend systems with Java Spring Boot and Kotlin, and modern frontend applications with Angular and React.
- Currently building a fraud-risk detection engine (ITAS) for a tax administration platform, developing Angular dashboards integrated with Java Spring Boot microservices and an AI/R-based risk-scoring engine.
- Proven track record on large-scale government systems, including a national Justice Case Management System (IJCMS) and a Ministry of Revenue backend platform.
- Hands-on with Angular and React for production UI work, Spring Boot/Kotlin microservices, PostgreSQL, Docker, Kubernetes, Keycloak, and Grafana/Loki observability.
- Passionate about clean architecture, microservices design, and delivering mission-critical, high-availability solutions.

EDUCATION

B.Sc. in Electrical & Computer Engineering — Wollega University, Computer Engineering Focus (2019 – 2023), GPA: 3.44 / 4.0

TECHNICAL EXPERTISE

Backend	Java Spring Boot, Kotlin, Java EE, RESTful APIs, Microservices, Apache Kafka, Spring Security, Node.js, Express.js
Frontend	Angular, React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, ShadCN, Ant Design, HTML5, CSS3
Risk / AI Integration	AI-driven risk-scoring models (R), REST integration of model outputs into Angular UIs
Databases	PostgreSQL, MySQL, MongoDB
DevOps	Docker, Kubernetes, CI/CD, GitLab, GitHub Actions, Linux
Observability	Grafana, Loki, Prometheus (basic)
Security	Keycloak, OAuth2, JWT, Role-Based Access Control (RBAC)
Testing & QA	Software Testing, Integration Testing, Selenium, Postman
Tools	IntelliJ IDEA, VS Code, Figma (basic), Git, GitLab, GitHub

EXPERIENCE DETAILS

- Working as a Software Developer for **Atlas Computer Technology**, Addis Ababa, Ethiopia — **May 2024 – Till Date.**

- Worked as a Quality Assurance Engineer & Frontend Developer for **Atlas Computer Technology**, Addis Ababa, Ethiopia — **Sep 2023 – May 2024.**
- Working as a Freelance Backend / Full-Stack Developer on **Upwork** (Self-employed, Rising Talent, 5.0 average rating) — **Sep 2025 – Present.**

PROJECT DETAILS

Project #1: ITAS – Tax Risk Engine

Client: Ministry of Revenue – Tax Administration

Role: Frontend / UI Developer (Angular)

Duration: March 2026 – Till Date

ITAS is a risk-engine module within the national tax administration system that screens every taxpayer for risk indicators, including fraud risk, using an AI/R-based scoring model. The Angular frontend surfaces taxpayer risk profiles and fraud-risk flags to caseworkers, and is integrated with multiple Java Spring Boot microservices for case and taxpayer data.

Responsibilities:

- Developed Angular dashboards to visualize taxpayer fraud-risk scores and risk-tier flags for caseworkers.
- Integrated the Angular frontend with multiple Java Spring Boot backend microservices via REST APIs.
- Worked with the data/AI team to surface AI- and R-generated risk-scoring outputs in the UI.
- Built reusable Angular components for risk-profile views, filters, and case drill-downs.
- Participated in requirement analysis and UI design for taxpayer risk-screening workflows.

Environment: *Angular, TypeScript, Java Spring Boot, REST APIs, Microservices, R (risk-scoring model), PostgreSQL*

Project #2: IJCMS – Integrated Justice Case Management System

Client: Police, Prosecutor, Court, Judge & Correction Departments

Role: Backend Developer (Java Spring Boot / Kotlin)

Duration: May 2024 – Till Date

A national-scale, mission-critical government system serving five justice departments, supporting secure, auditable case workflows from police intake through court adjudication.

Responsibilities:

- Architected and implemented backend microservices using Java Spring Boot and Kotlin, ensuring high availability and security across distributed modules.
- Integrated Keycloak and OAuth2/JWT for enterprise-grade authentication and role-based access control across departments.
- Automated bulk provisioning of 100+ users across 5 department groups via Python scripting against the REST API.
- Deployed and managed containerized services using Docker and Kubernetes; monitored system health with Grafana and Loki.
- Implemented CI/CD pipelines and maintained GitLab repositories following GitFlow for a multi-team engineering organization.

Environment: *Java Spring Boot, Kotlin, Keycloak, PostgreSQL, Docker, Kubernetes, Grafana, Loki, GitLab CI/CD*

Project #3: Ministry of Revenue (MoR) Backend System

Client: Ministry of Revenue

Role: Backend Developer

Duration: Sep 2023 – May 2024

A secure, scalable backend supporting national tax and revenue operations, built in collaboration with a cross-functional engineering team.

Responsibilities:

- Designed and implemented backend services using Java Spring Boot and Java EE.
- Developed RESTful APIs enabling communication between internal modules and external government systems.
- Enforced data integrity and security standards across the revenue platform.

Environment: *Java Spring Boot, Java EE, MySQL, PostgreSQL, REST APIs*

Project #4: Internal Git Management System

Client: Atlas Computer Technology (Internal Tool)

Role: Frontend Developer

Duration: Sep 2023 – May 2024

An internal tool built to streamline version-control workflows across the engineering team by centralizing repository activity into a single dashboard, reducing PR review cycle time.

Responsibilities:

- Led development of the UI using React, Tailwind CSS, ShadCN, and Ant Design.
- Designed and shipped multiple reusable UI components following atomic design principles.

Environment: *React.js, TypeScript, Tailwind CSS, ShadCN, Ant Design*

Project #5: Freelance Backend & Full-Stack Engineering (Upwork)

Client: Multiple international clients (Upwork)

Role: Freelance Backend / Full-Stack Developer

Duration: Sep 2025 – Till Date

A series of completed and ongoing freelance engagements for international clients, covering Spring Boot backend optimization, Kafka-based microservices, REST API integration, and a Spring Boot + React full-stack admin dashboard. Maintained a 5.0 average rating across all completed contracts on Upwork.

Responsibilities:

- Diagnosed and fixed a critical memory issue and resolved PostgreSQL migration problems on a Java Spring Boot project, improving overall backend stability (5.0-rated, client-endorsed for being collaborative and solution-oriented).
- Delivered an end-to-end REST API integration project, praised by the client for clean implementation and clear communication throughout (5.0-rated).
- Building a full-stack admin dashboard with a Spring Boot backend and React frontend, including authentication, dashboard analytics, and activity views.
- Developing Java/Kotlin backend services using REST APIs, Spring Security, and database caching strategies.
- Building a Backend API Admin Dashboard MVP applying enterprise architecture, software integration, and database design principles.

Environment: *Java Spring Boot, Kotlin, Apache Kafka, Spring Security, REST APIs, PostgreSQL, React, Grafana*
